To Whom It May Concern:

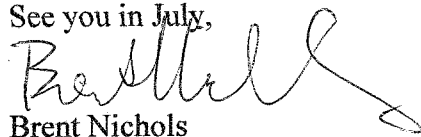

First of all, I am a daredevil. Secondly, I would like to perform a stunt at Seattle's own Space Needle this July.

My plan is to set a world record for the longest time standing on one leg and I have chosen atop the Space Needle as the location of my stunt. I need to know whether balancing on the actual tip will be physically possible, or if I will have to stand on the glass viewing area instead.

My plan is to earn publicity and sponsorship money while also raising awareness of the physical challenge that people like myself face who have only one leg. I have much confidence that I can beat the record since you could say that I have been practicing for this my whole life.

If there is no response to this letter, I will assume that you have accepted this written proposal and that I will be free to make my first attempt. Please let me know if this has been done before which would force me to cancel my plan, perhaps changing the location to Vegas' Stratosphere. Naturally, I would prefer the real thing.

See you in July,

A handwritten signature in black ink, appearing to read "Brent Nichols", with a long, sweeping tail extending to the right.
